what's this? another Zup!

Click! Boom!.... whoa.... accelerators... nifty. This is a interesting game. A bit short, and while I have not played Prince of Persia, it might be a... homage to it. Anyway, the HO puzzles are interesting, the other games fun, and it is good for hours of fun.

Do try it.. pretty gooooooooooooood.. best game 11/10

thanks alpharad. This is really, REALLY early in development XD great potential, very beautiful! But you must understand it's a raw piece. The water does not move, there is no footsteps and sometimes hitting stuff makes a sound, sometimes it does not. I have only spent about 20 minutes in game, and I have already witnessed two wild boars stuck together, a bird sitting on ground SHRINKING until it vanished and stones hanging on trees. :) Gonna be wonderful later on, but ATM it's...well, EA. Great game for fans of the platforming genre.

It was a bit hard for my taste, I really liked the art style and the visuals though, so be sure to give it a try!. Rather good shmup with an excellent soundtrack. Basically the Touhou formula except now enemy attack patterns are sync'ed to the soundtrack. It is easy to get hyped when the attacks and music come together just right. I'd say it is worth its asking price if you are itching for some bullet hell. As noted with some reviews, Normal difficulty is rather easy if you have any experience with the genre. Also, Lunatic difficulty needs to be unlocked via a shop. Easily attainable with 2 playthroughs for anyone with the skill for Lunatic but I felt it should be mentioned for the hardcore audience.

Heres to hoping that it marks the start of a series.. why and when did i buy this what the heck. Very confusing gameplay, progression seems strange through each run-through. Things like alternate paths never really explained, and it seems like you can easily get caught in endless loops

Cool uncle + Anime girl + Touhou + Super smash bros melee + memes = this game

Overall: 10/10. the game is beautiful. Really fun with friends/family.

Needs an online multiplayer.

Good game.. Good idea but, poor mechanics make it unenjoyable.. I am a big fan of Digital Eel's Infinite Space series. I bought SAIS shortly after it came out in 2002 and then when Weird Worlds came out I played the heck out of it. It had the same basic gameplay but enhanced resolution and a greater variety of actions.

I recently started playing the 3rd game in the series which transitions to 3D graphics. I don't think that 3D inherently ruins the gameplay of games that make the switch. However, in this case the simple 2D "window" GUI has been changed into an alternate GUI that does most of the same things but in a slower and less intuitive manner. There are some options (combat and otherwise) that seem to be missing.

The change to a 3D planet configuration doesn't change the gameplay in a positive way. It just makes it so that you need to rotate the sector before you move anywhere.

Pros in IS3:

- + Now you can flee to a star system of your choosing.
- + The 3D sector map means that you are less likely to get boxed in by nebulas or other hazards than on a 2D map.
- + The upgrade hull option (only available at each of your ships' respective homeworlds) is a welcome option especially if you are trying to conquer the sector.

Cons in IS3:

- Why do the smaller ships not follow directions in combat?
- Why have the fire, turn, move, ram, and grouping controls been changed so much in this sequel?
- Why can ships attack you from outside the battle grid?
- Why can the Zorg no longer teleport in combat?
- Why is no longer a fast-forward option for combat or map travel?
- Why is there no longer an option for an extra small sector map?
- The 3D in some ways makes it harder to quickly identify if your potential travel paths intersect a black hole or some nebula.
- Every action in the game seems to take longer than in previous entries (and not just because of the lack of fast-forward) - trading, switching out equipment, encounters that don't result in combat. This is a problem because games in this series were originally held up as the ultimate lunch-break game. Well no longer. And because of the lack of a save or suspend feature (and no smaller maps), you will probably not be able to have as many SATISFYING short gaming sessions with this game.

Neutral

\u2022 A partial flotilla (just some of your ships) retreat in combat is confusing at first (just drag the ships off the combat map), but in some ways it makes the maneuver easier to perform.

\u2022 Balance has been adjusted compared to previous games (Chromium Gong is no longer limitless uses, Hyperdrive takes more time, Damocles drones are a lot more difficult, and enemies in general are a lot more difficult on Hard mode).

In short buy Weird Worlds; pass on this entry.
